Azeed®

Azithromycin USP Tabs./Syrup

Upper Respiratory Track Infections

Azeed can be substituted for Amoxicillin in upper respiratory track infection

Lower Respiratory Track Infections

It is highly clinically effective in acute and chronic bronchitis and pneumonia

Acute Otitis media

Has become frequent choice for many common pediatric infection such as otitis media and pharyngitis

Azithromycin is an azalide, a subclass of macrolide antibiotics

Azithromycin is used to treat certain infections caused by bacteria, such as bronchitis; pneumonia; sexually transmitted diseases (STD); and infections of the ears, lungs, skin, and throat. Azithromycin is in a class of medications called macrolide antibiotics. It works by stopping the growth of bacteria. Antibiotics will not work for colds, flu, or other viral infections.

ASCARDILL™ is a low dose aspirin that helps prevent blood clotting and reduces the risk of heart attack and stroke in patients with blood vessel disorders. Low dose aspirin helps reduce blood stickiness, the tendency of blood to clot.

ASCARDILL™ is used to help protect against some of the problems which can be caused by clotting in the blood stream.

ASCARDILL™ may be useful if you are at risk of coronary artery disease, angina, transient ischaemic attacks (TIAs or mini strokes), stroke (due to a blood clot) or heart attack.

 **ASCARDILL™**

Aspirin 75mg/150mg + Glycine 37.5/75mg

Slow absorption gives maximum Anti-Clotting effect.

Betasec™

Betahistine dihydrochloride
8/16/24/32 MG

Rx Vertigo

Vertigo is usually associated with a problem in the inner ear balance mechanisms (vestibular system), in the syndrome and Meniere's disease.

Transient **vertigo can be caused by inflammation of the inner ear due to the common cold, influenza, and bacterial infections. Vertigo can also occur after long flights or boat journeys where the mind gets used to turbulence, resulting in a person's feeling as if he or she is moving up and down.** This usually subsides after a few days. Another source of vertigo is through exposure to high levels of sound pressure, rattling the inner ear and causing a loss of balance. Consumption of alcohol can also cause vertigo.

Rarely, vertigo-like symptoms may appear as **paraneoplastic syndrome (PNS)** in the form of opsoclonus myoclonus syndrome, an extremely rare multi-faceted neurological disorder associated with many forms of incipient cancer lesions or viruses.

- **Available as Tablets**
- Uses : Vertigo
- **Side effects*** Gastric upset, headache, rash, dizziness, sleeplessness

- Use with Care Bronchial asthma
- Do not give anti-histamines concurrently
- Not used in Pregnancy and breast feeding
- Children below 12 years
- Peptic ulcer

NOTE: * The side effects are seen in a small percentage of persons using the medicine. The benefits of using the drug usually out-weigh the side-effects. Your doctor is the best person to decide the use and dosage of any drug.

Betasec™
Betahistine dihydrochloride
8/16/24/32 MG

For chronic heart failure (CHF) [®]

CADROL

Bisoprolol Fumrate

- Hypertension,
- CAD
- Arrhythmias,
- MI
- CHF

USE CADROL

• Bisoprolol is in general metabolically neutral (lipids/ longterm therapy, glucose).

Cardioselective Beta-Blocker

- Bisoprolol is reliably effective for 24 hours in hypertension and coronary artery disease (angina pectoris) with a single dose per day.
- Bisoprolol has demonstrated significant survival benefit in CHF patients whatever the aetiology of the disease.

- Bisoprolol has a bioavailability of about 90%.
- Bisoprolol is removed from the plasma via 2 equally effective routes of clearance (balanced clearance):
50% metabolism to inactive metabolite
50% renal excretion of the unchanged substance.
No dosage adjustment of bisoprolol is necessary in patients with mild to moderate renal or hepatic dysfunction.
A maximum dose of 10 mg/day is called for only in terminal stages of insufficiency.

For chronic heart failure (CHF) [®]

NRX

DIAMONEX™

Diamorphine hydrochloride BP Injection
(5mg, 10mg, 30mg, 100mg, 500mg) I.M./I.V

A WHITE TO OFF-WHITE, STERILE, FREEZE DRIED POWDER OF DIAMONEX -Diamorphine Hydrochloride BP for reconstitution for injection.

Diamorphine may be used in the **treatment of severe pain** associated with **surgical procedures, myocardial infarction** or pain in the terminally ill and for the relief of dyspnoea in acute pulmonary oedema.

DIAMONEX -Diamorphine may be given by the intramuscular, intravenous or subcutaneous routes. Glucose intravenous infusion is the preferred diluent, particularly when the drug is administered by a continuous infusion pump over **24 to 48 hours**, although it is also compatible with sodium chloride intravenous infusion.

Diamorphine is a potent opiate analgesic which has a more rapid onset of activity than morphine as the first metabolite, monoacetylmorphine, more readily crosses the blood brain barrier. In man, diamorphine has a half life of two to three minutes. Its first metabolite, monoacetylmorphine, is more slowly hydrolysed in the blood to be concentrated mainly in skeletal muscle, kidney, lung, liver and spleen. Monoacetylmorphine is metabolised to morphine. Morphine forms conjugates with glucuronic acid. The majority of the drug is excreted via the kidney as glucuronides and to a much lesser extent as morphine. About 7-10% is eliminated via the biliary system into the faeces. Diamorphine does not bind to protein. However, morphine is about 35% bound to human plasma proteins, mainly to albumin. The analgesic effect lasts approximately three to four hours.

* **Water for Injections (Not detectable in the finished product).**

2ml Neutral glass ampoules, PhEur. Type 1. Ampoules are packed into cartons of 5, 10 or 50.

NOTE: The solution should be used immediately after preparation.

DIAMONEX™

Diamorphine hydrochloride BP Injection
(5mg, 10mg, 30mg, 100mg, 500mg) I.M./I.V

Etanercept. FDA-approved to treat rheumatoid arthritis, psoriasis, ankylosing spondylitis, psoriatic arthritis, and juvenile rheumatoid arthritis.

 **Enbrol®**
(etanercept 25/50mg)

Moderate to Severe Plaque Psoriasis

ENBROL is indicated for the treatment of adult patients (18 years or older) with chronic moderate to severe plaque psoriasis who are candidates for systemic therapy or phototherapy.

* In medical studies, nearly half of patients saw a significant improvement in their plaque psoriasis within 3 months of using ENBROL. Overall, 3 out of 4 patients saw improvement. ENBROL can work fast; many patients saw improvement within 2 months. ENBROL has been shown to be effective through 12 months of therapy.

ENBROL is a type of protein called a tumor necrosis factor (TNF) blocker that blocks the action of a substance your body makes called TNF. Tumor necrosis factor is made by your body's immune system. People with immune diseases such as rheumatoid arthritis, juvenile idiopathic arthritis, ankylosing spondylitis, psoriatic arthritis, and plaque psoriasis have too much TNF in their bodies.

Emergency Contraceptive Pill

G-pill™

1 Tablet

1.5 mg

Emergency, Contraceptive, Pill, Gpill, **G-pill**, ECP, conceive, Conception, Morning after, Unintended pregnancy, Female condoms, Sex, Unwanted pregnancy, ...

G-pill is an oral tablet. It should be swallowed with some water within 72 hours of unprotected sex to prevent pregnancy. It is advisable to take G-pill after meals to prevent vomiting. If you vomit within three hours of taking G-pill, you should take another G-pill as soon as possible. G-pill should not be used if you are already pregnant because it is only a backup or emergency method of contraception. It is not as effective as other regular birth control methods. G-pill is not recommended if you are allergic to levonorgestrel.

Important safety aspects: G-pill is neither a regular contraceptive nor an abortion pill. It is not a substitute for condoms and does not protect against sexually transmitted diseases including HIV/AIDS.

G-pill is a single-pill
emergency contraceptive that offers
you an effective way to prevent an unplanned pregnancy

Humogen®

[somatropin (rDNA origin) for injection]

Human Growth Hormone

Available as: 4 i.u. /16 i.u.

Saizen growth | Normal growth

It is a purified growth hormone (GH) of recombinant DNA origin that stimulates skeletal, linear bone, muscle, and organ growth.

Saizen means Growth

It promotes growth by inducing hyperplasia. It acts on cell surface receptors present on all cells. Binding of GH molecule to the extracellular domain of two growth hormone receptors induces their dimerization and activates intracellular domain through a single transmembrane peptide segment.

Saizen® is The registered Trademark of Taj pharmaceuticals Ltd., India

NEOGRA®
(sildenafil citrate) tablets

ONE TABLET IN 24 HOURS

NEOGRA® (sildenafil citrate) Erectile Dysfunction Medication.

Sex may not be the most important thing in life. But to most men, it's up there. So don't let erection problems keep you from a satisfying sex life.

What is erectile dysfunction?

ED is when a man has problems getting or maintaining an erection long enough for sex. It happens when not enough blood flows to the penis.

ED isn't the same for all men. Some men aren't able to get an erection at all.

Others can get one, but it's **not hard enough for sex. And others get a hard erection but lose it before or during sex.**

ED is a medical condition. So **in most cases, erections will not improve without treatment.**

A common issue

ED is more common than you might think. **More than half of all men over 40 have some difficulty getting and maintaining an erection.**

The fact is, guys at any age can experience ED.

नियोग्रा®

NEOGRA (25-mg, 50-mg, 100-mg) tablets.

A 5000-IU vial of RECOBIN-X powder

5000-IU vial RECOBIN™-X

Thrombin, Topical (Recombinant)

A 5000-IU vial of RECOBIN-X powder, when reconstituted with 5 mL of sterile 0.9% sodium chloride, USP, from the supplied prefilled syringe yields a solution containing 1000 IU/mL of Thrombin, topical (Recombinant) for clinical use.

RECOBIN™ Thrombin, topical (Recombinant) is indicated as an aid to hemostasis whenever oozing blood and minor bleeding from capillaries and small venules is accessible and control of bleeding by standard surgical techniques is ineffective or impractical.

2 DOSAGE AND ADMINISTRATION

For topical use only. DO NOT INJECT.

Apply on the surface of bleeding tissue only.

The volume of reconstituted RECOBIN required will vary, depending on the size and number of bleeding sites to be treated and the method of application. The healthcare professional should determine the number of vials required to produce a sufficient volume of reconstituted product.

The following supplies are provided in each RECOBIN package:

- * One vial of RECOBIN (5000 IU)
- * One prefilled diluent syringe containing sterile 0.9% sodium chloride injection, USP (5 mL)
- * One sterile, needle-free transfer device
- * One sterile empty syringe (5 mL)

Inspect the integrity of the RECOBIN package and contents. Do not use if the packaging or contents have been damaged or opened.

2.1 Reconstitution of RECOBIN- X

The lyophilized powder is reconstituted, using the supplied diluent, in less than 1 minute at room temperature.

REXPRIN™ Aspirin Tablets

Can an aspirin a day
really prevent a heart attack?

YES
U s e w h e n

Mild to moderate pain
Increased risk of blood clotting
Heart attack
Stroke

EXCELLENT PAINKILLER
AND ANTI-INFLAMMATORY

Rexprin Aspirin (USAN), also known as acetylsalicylic acid is a salicylate drug, often used as an analgesic to relieve minor aches and pains, as an antipyretic to reduce fever, and as an anti-inflammatory medication. Aspirin also has an antiplatelet, or "anti-coagulate", effect by inhibiting thromboxane prostaglandins, which under normal circumstances bind platelet molecules together to repair damaged blood vessels. This is why aspirin is used in long-term, low doses to prevent heart attacks, strokes, and blood clot formation in people at high risk for developing blood clots. It has also been established that low doses of aspirin may be given immediately after a heart attack to reduce the risk of another heart attack or of the death of cardiac tissue. The main undesirable side effects of aspirin are gastrointestinal ulcers, stomach bleeding, and tinnitus, especially in higher doses. In children and adolescents, aspirin is no longer used to control flu-like symptoms or the symptoms of chickenpox or other viral illnesses, due to the risk of Reye's syndrome.

Use of Rexprin (Aspirin) is to treat the **various forms of arthritis-- including rheumatoid arthritis, juvenile rheumatoid arthritis, osteoarthritis, and some other rheumatological diseases.** About 23.3 percent of the population uses aspirin for this purpose.

* The side effects are seen in a small percentage of persons using the medicine. The benefits of using the drug usually out-weigh the side-effects. Your doctor is the best person to decide the use and dosage of any drug.

Tyrael[®] 1MG/ 2MG/4MG
Glimepiride Tablets

ORAL BLOOD-GLUCOSE-LOWERING DRUG

CONVENIENCE COMPLIANCE CONTROL

Tyrael is an oral diabetes medicine that helps control blood sugar levels. This medication **helps your body respond better to insulin produced by your pancreas.**

Tyrael is used together with diet and exercise to treat type 2 (**non-insulin dependent**) diabetes. Insulin or other diabetes medicines are sometimes used in combination with this medicine if needed.

TYRAEL[®] (glimepiride tablets) is an oral blood-glucose-lowering drug of the sulfonylurea class. Glimepiride is a white to yellowish-white, crystalline, odorless to practically odorless powder formulated into tablets of 1-mg, 2-mg, and 4-mg strengths for oral administration. TYRAEL tablets contain the active ingredient glimepiride and the following inactive ingredients: lactose (hydrous), sodium starch glycolate, povidone, microcrystalline cellulose, and magnesium stearate. In addition, TYRAEL 1-mg tablets contain Ferric Oxide Red, TYRAEL 2-mg tablets contain Ferric Oxide Yellow and FD&C Blue #2 Aluminum Lake, and TYRAEL 4-mg tablets contain FD&C Blue #2 Aluminum Lake.

TOPAMET™
(topiramate) tablets

This medicine is an anticonvulsant used alone or with other medicines to control certain types of seizures. It may be also used to prevent migraine

headaches or to treat other conditions as determined by your doctor.

This drug is used to treat epilepsy in both children and adults. In many cases it can also be used as an antidepressant. In children it is also indicated for treatment of Lennox-Gastaut syndrome (a disorder that causes seizures and developmental delay). It is also Food and Drug Administration (FDA) approved for, and now most frequently prescribed for, the prevention of migraines. It has been used by psychiatrists to treat bipolar disorder, although it is not FDA approved for this purpose. This drug has been investigated for use in treatment of obesity, especially to aid in the reduction of binge eating, and also as a possible treatment for alcoholism. However, these uses are not actively promoted by the manufacturer, and like its use for bipolar disorder, are off-label uses.

>> In order to avoid early side-effects (e.g. cognitive dysfunction) the initial dosage normally is low and increased in slow steps.
The usual initial dosage is 25 to 50 mg daily in 2 single doses. Recommended increments are 25 to >> 50mg every 1 or 2 weeks.
Common dosages for maintenance treatment are 100 to 200 mg daily. The highest dosage possible is 1,000 mg daily in divided doses.

Metastatic Breast Cancer Treatment

For Advanced Breast Cancer Patients

WEMPRATM
(ixabepilone) for Injection

(ixabepilone) for Injection

Wempra the treatment
of aggressive metastatic or locally
advanced breast cancer no longer
responding to currently
available chemotherapies.

WEMPRA Offers New Hope for Breast Cancer Treatment.

WEMPRA (ixabepilone) is a semisynthetic analog of epothilone B indicated for the treatment of patients with metastatic or locally **advanced breast cancer.**

WEMPRA is indicated as monotherapy for the treatment of metastatic or locally **advanced breast cancer in patients whose tumors are resistant or refractory to anthracyclines, taxanes, and capecitabine.**

WEMPRA is indicated in combination with capecitabine for the **treatment of patients with metastatic or locally advanced breast cancer** resistant to treatment with an anthracycline and a taxane, or whose cancer is taxane resistant and for whom further anthracycline therapy is contraindicated. Anthracycline resistance is defined as progression while on therapy or within **6 months in the adjuvant setting or 3 months** in the metastatic setting. Taxane resistance is defined as progression while on therapy or within 12 months in the adjuvant **setting or 4 months in the metastatic setting.**

Ixabepilone (INN; also known as azaepothilone B, codenamed BMS-247550) is an epothilone B analog
