

ADROL®

For chronic heart failure (CHF)

Bisoprolol Fumrate

- Hypertension,
- CAD
- Arrhythmias,
- MI
- CHF

USE CADROL

• Bisoprolol is in general metabolically neutral (lipids/ longterm therapy, glucose).

Cardioselective Beta-Blocker

- Bisoprolol is reliably effective for 24 hours in hypertension and coronary artery disease (angina pectoris) with a single dose per day.
- Bisoprolol has demonstrated significant survival benefit in CHF patients whatever the aetiology of the disease.

- Bisoprolol has a bioavailability of about 90%.
- Bisoprolol is removed from the plasma via 2 equally effective routes of clearance (balanced clearance):
50% metabolism to inactive metabolite
50% renal excretion of the unchanged substance.
No dosage adjustment of bisoprolol is necessary in patients with mild to moderate renal or hepatic dysfunction.
A maximum dose of 10 mg/day is called for only in terminal stages of insufficiency.
