

Dytrokem[®]
Torsemide Tablets (Edema)

Dytro-Kem^{10 mg}
Torsemide Tablets (Edema)

TAJ PHARMACEUTICALS LIMITED

“Working for healthier India”

USES

Torsemide increases the amount of urine you make, which causes your body to get rid of excess water. This drug is used to treat high blood pressure. Lowering high blood pressure helps prevent strokes, heart attacks, and kidney problems.

This medication also reduces swelling/fluid retention (edema) which can result from conditions such as congestive heart failure, liver disease, or kidney disease. This can help to improve symptoms such as trouble breathing.

HOW TO USE

Take this medication by mouth with or without food, usually once a day, or as directed by your doctor. The dosage is based on your medical condition and response to therapy. It is best to take this medication early in the day, before 4-6PM, to prevent having to wake up during the night to urinate.

Consult your doctor or pharmacist if you have questions about your dosing schedule. Use this medication regularly in order to get the most benefit from it. Remember to use it at the same time each day as directed. It is important to continue taking this medication even if you feel well. Most people with high blood pressure do not feel sick. Generally, it may take 4-6 weeks, sometimes up to 12 weeks, before the full blood pressure-lowering effect is seen. Do not stop taking this medication without consulting your doctor. Cholestyramine and colestipol can decrease the absorption of Dytro - Kem[®]. If you are taking either of these drugs, separate it from Dytro - Kem[®] by at least 2 hours. If your condition persists or worsens, contact your doctor

SIDE EFFECTS

Dizziness, lightheadedness, headache, blurred vision, loss of appetite, stomach upset, diarrhea, or constipation may occur as your body adjusts to the medication. If any of these effects persist or worsen, notify your doctor or pharmacist promptly. This medication may lead to excessive loss of body water and minerals (including potassium). Tell your doctor immediately if you have any of these unlikely but serious symptoms of dehydration or mineral loss: muscle cramps or weakness, confusion, severe dizziness, drowsiness, unusual dry mouth or thirst, nausea or vomiting, fast/irregular heartbeat, unusual decrease in the amount of urine, fainting, seizures. Tell your doctor immediately if any of these unlikely but serious side effects occur: chest pain, numbness/tingling of the arms/legs, ringing in the ears, hearing loss, decreased sexual ability.
