“Working for healthier India”

**Celocard belongs to a group of medicines called beta-blockers, which block receiving bêtas in the heart, of the lungs and other bodies of the body. The blocking of these receivers prevents the action of two chemicals called noradrenalin and the adrenalin which occur naturally in the body.** Those are often mentioned because the chemicals of ' combat or flight ' because they are responsible for the reaction of the body to the stressing situations. The blocking of the receiving bêtas in the heart makes more slowly beat the heart and with less force. This means that the pressure to which blood is pumped out of the heart to the remainder of the body is reduced.

This medicine also widens the arteries. They are two in the manners of which the Celocard assistance to reduce the blood pressure, however the whole mechanism is not entirely included/understood.
