

Combi Fast Plus®
Paracetamol IP, Phenylephrine, Triprolidine

Paracetamol IP, Phenylephrine, Triprolidine
COMBI FAST PLUS
Tablet

Combi Fast Plus

Composition

Paracetamol IP,
Phenylephrine,
Triprolidine

Properties

Drug combined with analgesic, antipyretic, decongestant and expectorant action.

Paracetamol inhibits cyclooxygenase and reduces prostaglandins synthesis, pain and temperature. Ascorbic acid compensates vitamin C loss that is characteristic for the incipient phases of acute respiratory infections.

Phenylephrine contracts sanguine vessels and reduces congestion.

Terpinhydrate stimulates bronchial secretion and facilitates expectoration. Caffeine increases the analgesic effect of paracetamol.

Prescribed for diseases provoked by cold, influenza.

Contraindications

Hyper sensitivity to any of the drug components, severe renal and hepatic affections, arterial hypertension, hyperthyroidism, diabetes, heart diseases.

Dosing

Adults - 2 tablets (maximum 4 tablets) per day. 6-12 year old children - 1 tablet 4 times per day at the most.

Side effects

Allergic reaction (cutaneous eruption, angioneurotic edema, rash). Rarely arterial hypertension (cephalgia, nausea, vomiting, diarrhea, insomnia, palpitations).

Drug interactions

The drug is incompatible with tricyclic antidepressants (risk of hypertensive crisis) and beta-blockers.

Cautions

pregnancy and lactation period, children younger than 3 years.
