Combi Fast

Composition

Combi Fast® Tablets

Each tablet contains Ibuprofen IP 400 mg
and Paracetamol IP 325 mg

Combi Fast® is a combination of the over the counter medications Paracetamol (AKA Acetaminophen/AKA Tylenol) and Ibuprofen (AKA Advil). Ibuprofen is an NSAID (Non Steroidal Anti-Inflammatory Drug), and Paracetamol/Acetaminophen is a common over the counter pain relief medication.

The two drugs seem to work together in a "1+1=3" action, making the combination more effective together than either would be separately, and seemingly more effective in combination than the drug combination should theoretically allow.

Paracetamol's pain relief action lies almost exclusively within the brain, whereas Ibuprofen's pain relief action lies more heavily within the body (It's Anti-Inflammatory component). It is likely that this dual action on body and brain account for the synergistic action of the combination.

Description

Combi Fast® is a combination of two well-established drugs: ibuprofen and paracetamol. Ibuprofen is a propionic acid derivative with effective analgesic, anti-inflammatory and antipyretic properties. Paracetamol is an acetaminophen derivative with analgesic, antipyretic properties. Ibuprofen and paracetamol combined together provide effective relief from pain and fever.

Indications

Combi Fast® is indicated in the treatment of minor aches and pains such as headaches, toothaches, muscular aches, backaches, pain due to inflammation and for reduction of fever with any of the above conditions.

Dosage

Combi Fast® Tablets Adults and children (12 years and over) One tablet thrice daily.

Contraindications

Ibuprofen is contraindicated in patients with peptic ulcers, asthma. Paracetamol is contraindicated in patients with hepatic dysfunction.
