

Femidin®

Femidin

Each tablet contains

Composition

Famotidine.....20 mg
Famotidine.....40 mg

Indications

Duodenal and benign gastric ulcers: 40 mg once at bedtime or 20 mg twice daily, 4-8 weeks.

Description

Famotidine binds competitively to H₂-receptors located on the basolateral membrane of the parietal cell, blocking histamine effects. This competitive inhibition results in reduced basal and nocturnal gastric acid secretion and a reduction in gastric volume, acidity, and amount of gastric acid released in response to stimuli including food, caffeine, insulin, betazole, or pentagastrin.

Contraindications

Hypersensitivity to any component of these products. Cross sensitivity in this class of compounds has been observed. Therefore, PEPCID should not be administered to patients with a history of hypersensitivity to other H₂-receptor antagonists.

Side effects

- *common: headache, fatigue, drowsiness, nausea, vomiting
- *less common: blurred vision, decreased sexual desire or function, swelling of breasts in men and women, temporary hair loss
- *serious: irregular heart rhythm, bleeding difficulties, bruising, fever, chills

Dosage

As per physician's advice.

Fruitomin®

Fruitomin

The present study investigated the effect of a protein hydrolysate from green algae. The observed properties of the algae protein hydrolysate suggest that it is capable of stimulating enzyme processes in addition to having some antitoxic effect in skeletal muscle.

Dosage

As per the physician's advice.
