

# Look's hair Dye Brown

 ®

## Look's hair Dye Brown

 ®

### Compositions

Aqua/Water, Cetearyl , Alcohol, Deceth, Propylene Glycol, Laureth, Oleth-30, Ammonium Hydroxide,

Lauric Acid, Hexadimethrine Chloride, Glycol Distarate, Resorcinol, ethanolamine, Polyquaternium-22, Dimethicone.

### Indications

Helps colour and condition the hair naturally.

### Descriptions

Hair color is the result of pigmentation due to the presence of the chemicals of melanin and phaeomelanin. Human beings have many variations in hair color and hair texture. In general, the more melanin, the darker the hair color; the more phaeomelanin, the lighter it is. Usually the color of children's and adults' hair varies from pale yellow (blonde) to deep black. Hair may also come in more than one shade of color on one's head. As an example, the shade of one's hair color may change from a light shade to a darker one as time elapses.
