

Setro - 4mg Tab ®

Setro - 4mg Tab ®

Each tablet contains

Composition

Ondansetron.....4 mg

Indications

Constipation, sensation of warmth, flushing in the epigastrium. Rare allergic reaction such as rash, anaphylaxis, bronchospasm, breathlessness, angioedema, urticaria, headache, transient blurred vision, transient elevations of transaminase levels.

Description

Ondansetron belongs to a class of drugs called antiemetics. Nausea and vomiting may be caused by the release of serotonin with the use of some chemotherapy agents. The serotonin binds to cell receptors called 5-HT₃ which stimulate the vomiting reflex. Ondansetron helps to prevent nausea and vomiting by blocking 5-HT₃ receptors so that the serotonin is not able to bind to the receptor and initiate the vomiting reflex.

Side effects

- Headache
- Constipation
- Diarrhea
- Fatigue, weakness

Dosage

As per the physician's advice.
